

JLG Forklift Parts

JLG Forklift Part - Following retirement in the late 1960's, John L. Grove embarked on a cross country RV expedition. After spending many years establishing his family built crane company with his brother, John had no idea that this trip would bring about the rise of JLG Industries, Inc. The world leader of mobile aerial work platforms and precision material handling technologies was the end result of a road trip.

During their trip, John reacquainted himself with previous business associates along the way. In combination with these conversations and a significant event; two workers were unfortunately electrocuted on scaffolding when the Groves were passing through the Hoover Dam. John discovered a vast marketplace for a product that could promptly and safely elevate individuals in the air to accomplish maintenance and other construction services.

Upon returning from their travels, John formed a joint venture with two friends and bought a metal fabricating business in McConnellsburg, Pennsylvania. In 1970, starting operations with a crew of twenty personnel, they created and sold the first JLG aerial work platform. The company incorporates some of the simple design essentials of that original lift into existing designs.

Since then, JLG Forklifts have come a long way from when Mr. John L. Grove came back from his fateful cross-country trip and since the first JLG aerial platform entered the market. As of today, the business has extended itself into many different global marketplaces and continues to develop innovative machines to ensure that customers are able to become safer and more resourceful within their workplace.
